Отчет по лабораторной работе
Using Microsoft Azure management tools

Выполнил:

Кислюк И. В.

студент группы K4120

Проверил: Ананченко И. В.

Санкт-Петербург

2018

ЦЕЛЬ РАБОТЫ:

Ознакомиться с облачными технологиями и возможностями, которые предоставляет компания Microsoft. Установить и ознакомиться с программным обеспечением для работы с Azure

ХОД РАБОТЫ:

Задание 1: Установка и использование Azure PowerShell модулей. Произведем настройку и установку предоставленного ПО

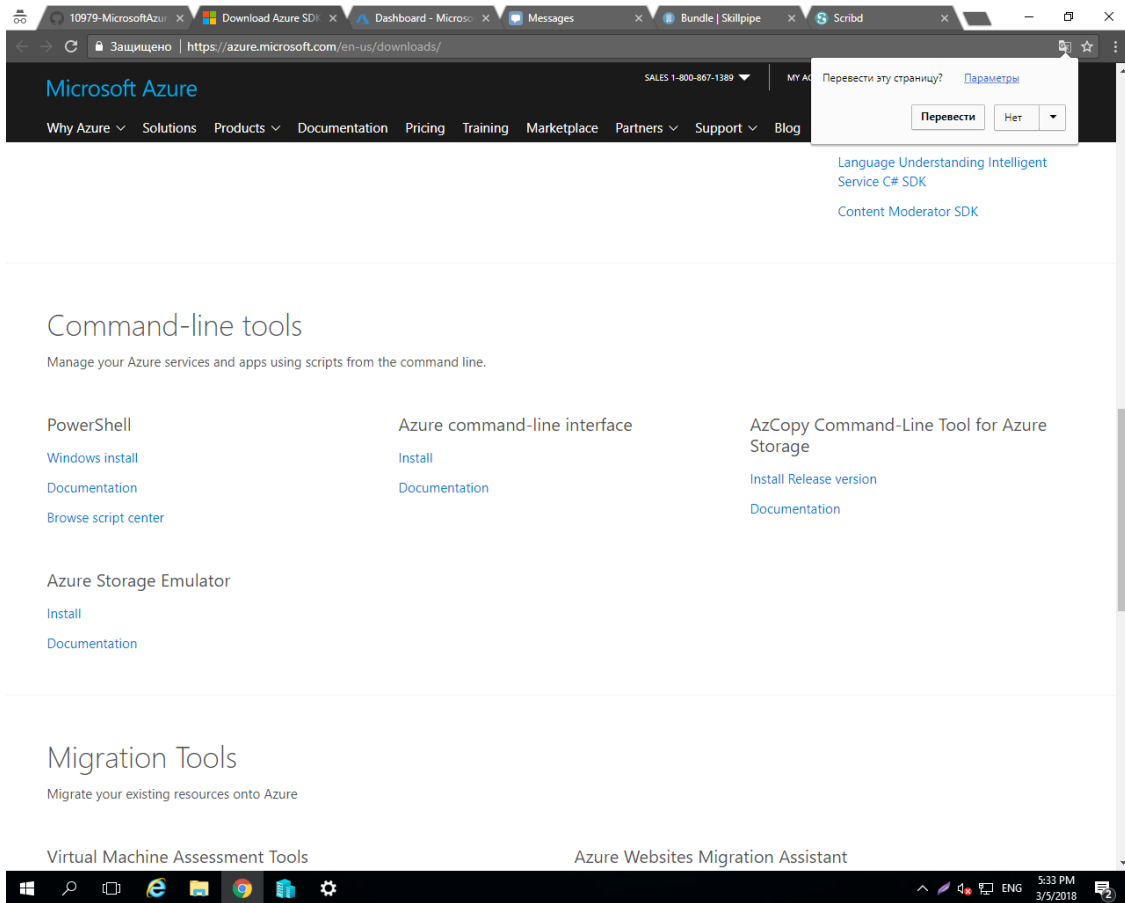

Рисунок 1 – Пример установки интерфейса PowerShell ISE

Рисунок 2 – Пример дополнений для PowerShell ISE

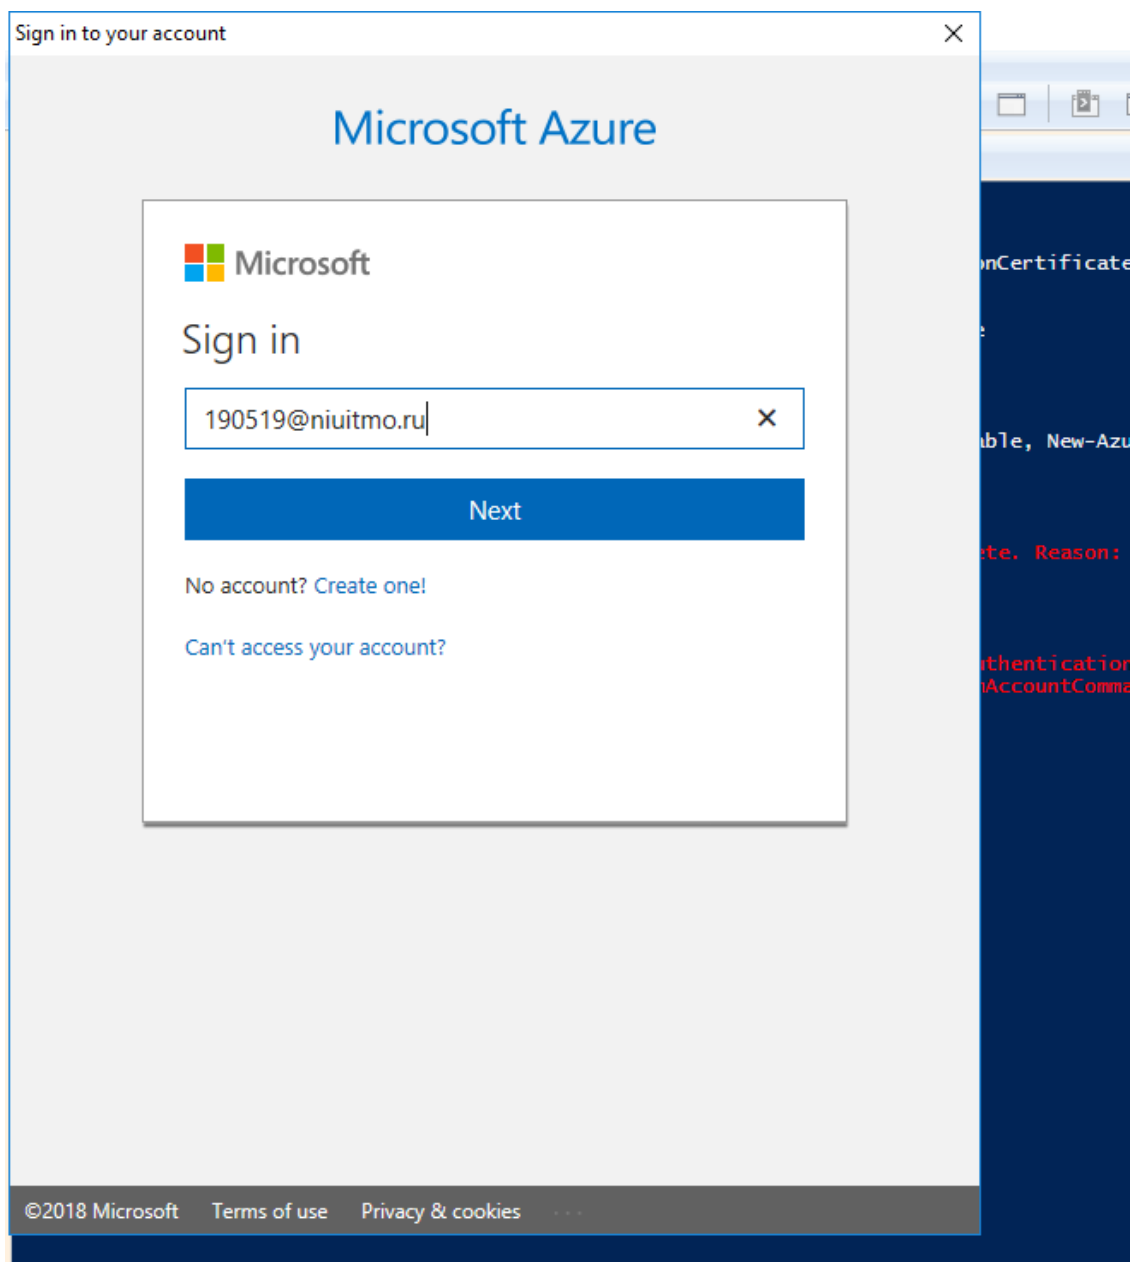

Рисунок 3 – Пример входа для PowerShell ISE

Задание 2: Установка и использование Azure CLI. Необходимо установить и произвести такие же действия для проверки и получение данных подписки через консольный интерфейс

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.14393]
(c) 2016 Microsoft Corporation. All rights reserved.

C:\Users\Administrator>az

Welcome to Azure CLI!
-----
Use 'az -h' to see available commands or go to https://aka.ms/cli.

Telemetry
-----
The Azure CLI collects usage data in order to improve your experience.
The data is anonymous and does not include commandline argument values.
The data is collected by Microsoft.

You can change your telemetry settings with 'az configure'.

  AZURE

Welcome to the cool new Azure CLI!
Here are the base commands:

  account      : Manage Azure subscription information.
  acr          : Manage Azure Container Registries.
  acs          : Manage Azure Container Services.
  ad           : Manage Azure Active Directory Graph entities needed for Role Based Access Control.
  advisor      : (PREVIEW) Manage Azure Advisor.
  aks          : Manage Azure Kubernetes Services.
  appservice   : Manage App Service plans.
  backup       : Commands to manage Azure Backups.
  batch        : Manage Azure Batch.
  batchai      : Batch AI.
  billing      : Manage Azure Billing.
  cdn          : Manage Azure Content Delivery Networks (CDNs).
  cloud        : Manage registered Azure clouds.
  cognitiveservices: Manage Azure Cognitive Services accounts.
  configure    : Display and manage the Azure CLI 2.0 configuration. This command is interactive.
  consumption  : Manage consumption of Azure resources.
  container    : (PREVIEW) Manage Azure Container Instances.
  cosmosdb     : Manage Azure Cosmos DB database accounts.
  disk         : Manage Azure Managed Disks.
  dla          : (PREVIEW) Manage Data Lake Analytics accounts, jobs, and catalogs.
  dls          : (PREVIEW) Manage Data Lake Store accounts and filesystems.
  eventgrid    : Manage Azure Event Grid topics and subscriptions.
  extension    : Manage and update CLI extensions.
  feature      : Manage resource provider features.
  feedback     : Loving or hating the CLI? Let us know!
  find         : Find Azure CLI commands.
  functionapp  : Manage function apps.
  group        : Manage resource groups and template deployments.
  identity     : Managed Service Identities.
```

Рисунок 10 – Пример установки консольного интерфейса

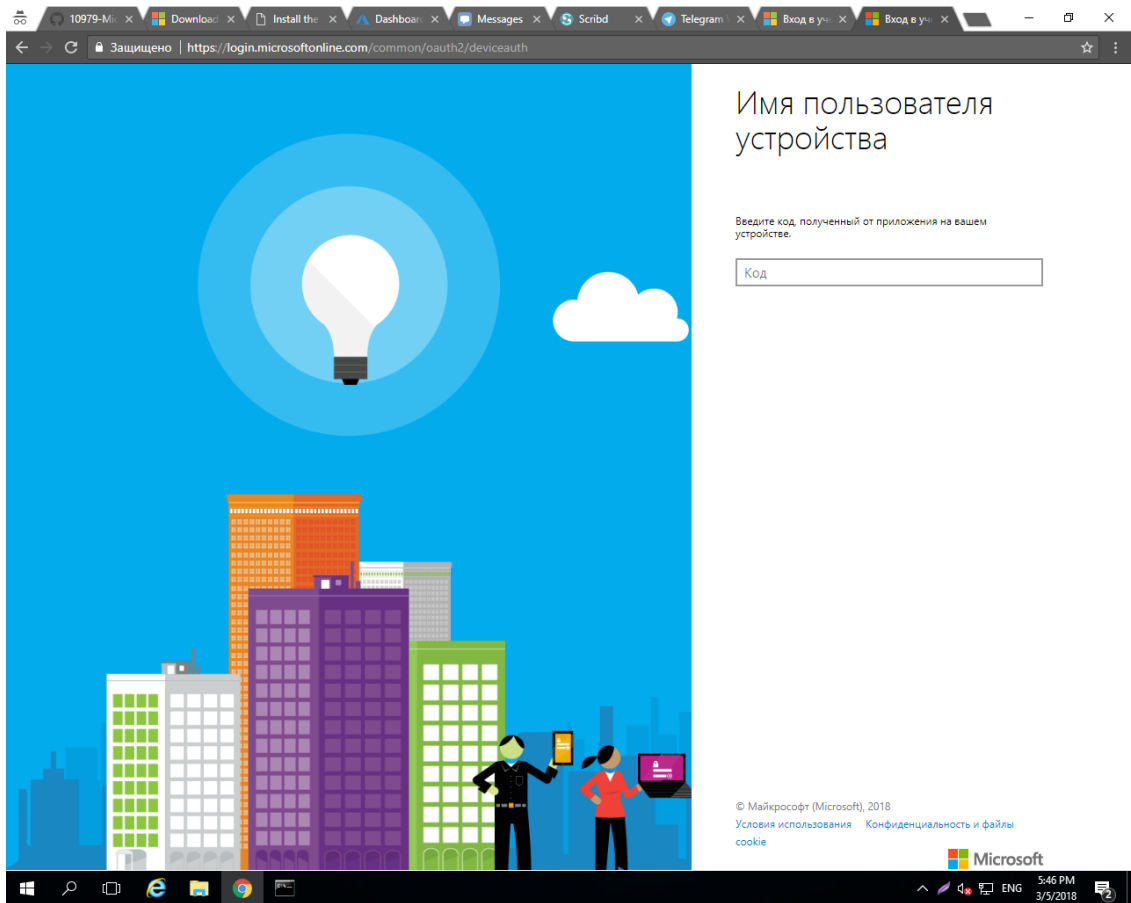

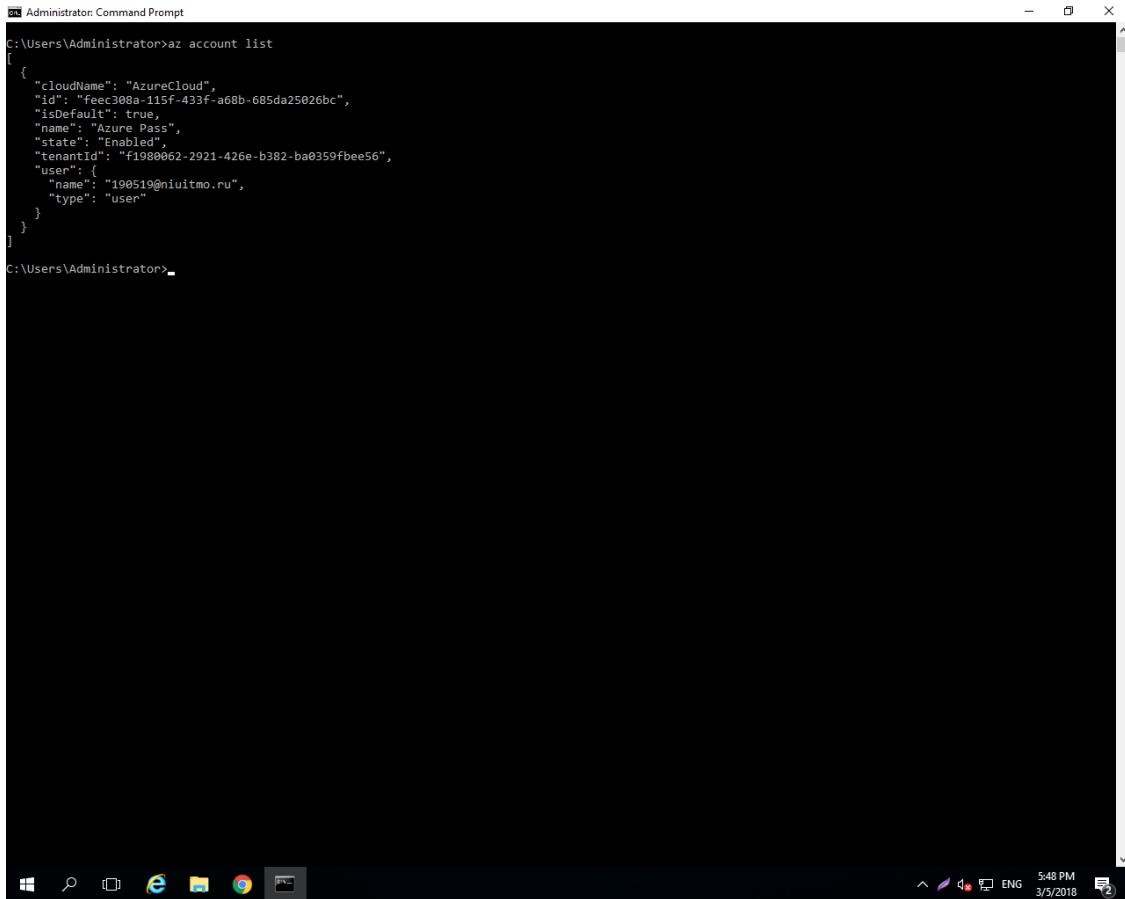

Рисунок 11 – Пример успешного входа через браузер

```
Administrator: Command Prompt
image      : Manage custom virtual machine images.
interactive : Start interactive mode.
iot        : (PREVIEW) Manage Internet of Things (IoT) assets.
keyvault   : Safeguard and maintain control of keys, secrets, and certificates.
lab        : Manage Azure DevTest Labs.
lock       : Manage Azure locks.
login      : Log in to Azure.
logout     : Log out to remove access to Azure subscriptions.
managedapp : Manage template solutions provided and maintained by Independent Software Vendors (ISVs).
monitor    : Manage the Azure Monitor Service.
mysql      : Manage Azure Database for MySQL servers.
network    : Manage Azure Network resources.
policy     : Manage resource policies.
postgres   : Manage Azure Database for PostgreSQL servers.
provider   : Manage resource providers.
redis      : Access to a secure, dedicated Redis cache for your Azure applications.
reservations : Manage Azure Reservations.
resource   : Manage Azure resources.
role       : Manage user roles for access control with Azure Active Directory and service principals.
sf         : Manage and administer Azure Service Fabric clusters.
snapshot   : Manage point-in-time copies of managed disks, native blobs, or other snapshots.
sql        : Manage Azure SQL Databases and Data Warehouses.
storage    : Manage Azure Cloud Storage resources.
tag        : Manage resource tags.
vm         : Provision Linux or Windows virtual machines.
vmss       : Manage groupings of virtual machines in an Azure Virtual Machine Scale Set (VMSS).
webapp     : Manage web apps.

C:\Users\Administrator>az login
To sign in, use a web browser to open the page https://aka.ms/devicelogin and enter the code CRAV3HRYK to authenticate.

Рисунок 12 – Пример успешного входа через CLI

The image shows a Windows Command Prompt window titled "Administrator: Command Prompt". The command prompt is at the C:\Users\Administrator> directory. The command "az account list" has been entered, and the output is displayed as a JSON array containing one object. The object represents an Azure account with the following details: cloudName is "AzureCloud", id is "feec308a-115f-433f-a68b-685da25026bc", isDefault is true, name is "Azure Pass", state is "Enabled", tenantId is "f1980062-2921-426e-b382-ba0359fbee56", and user is an object with name "190519@niuitmo.ru" and type "user".

Рисунок 17 – Пример списка провайдеров с определенным типом по местоположению

ВЫВОД:

Было проведено ознакомление с технологиями Azure, установлено необходимое программное обеспечение для работы с подписками и дата центрами через консольный интерфейс Azure и Azure PowerShell
